Weight		10 kg (Net)	1
		TO Kg (14CL)	

# **DISASSEMBLY INSTRUCTIONS**

### 1. TOOLS REQUIRED FOR DISASSEMBLY

Phillips-head screwdrivers (for M5 and M3)
Slotted-head screwdrivers (medium and small sizes)

Hexagon-head wrench (for hexagon socket headless set screw M4)

Nippers

Hexagon box type screwdrivers (for M5 and M3)

### 2. DO THE FOLLOWING PRIOR TO DISASSEMBLY:

- (1) Remove the dust cover.
- (2) Remove the turntable platter.
- (3) Fix the tone arm in place with the lock-lever of the
- (4) Place the set on a suitable bench with the bottom base upward. (Fig. 1)

### 3. REMOVE THE MOTOR

- (1) Remove with a Phillips-head screwdriver the eight screws which hold the bottom base (Fig. 1).

  NOTE: One of the eight screws is placed behind the audio-insulated leg A as shown in Fig. 1.
- (2) Remove the return plate (1) and return arm (8).
- (3) Disconnect with a nipper the lead wires of servo controller circuit board except for one from motor.
- (4) Remove the servo controller circuit board from the P.C.B. mounting spacer (1).
- (5) Disconnect with a nipper the grounding wire of motor (Fig. 2).
- (6) Place the set on a suitable bench with the surface of chassis upward.
- (7) Remove the drive gear 5.
- (8) Remove the three screws A which fasten the motor. (Fig. 3) Then the motor can be removed.

### 4. REMOVE THE TONE ARM

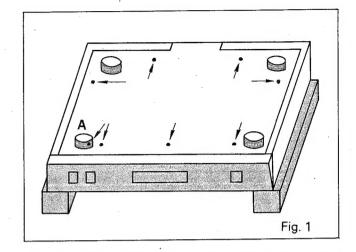

- (1) Remove the return plate. 10
- (2) Remove the shield case 39, disconnect from the shield connector plate the lead wires coming from the tone arm and remove the wirings.
- (4) Remove the tone arm mounting nut (5)
- (5) Place the set on a suitable bench with the surface of chassis upward.
- (6) Remove the three screws B described in Fig. 3.

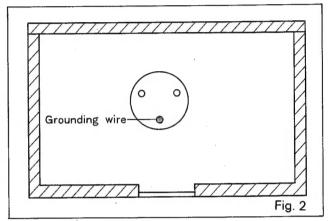

### 5. REMOVE THE VARIABLE RESISTOR

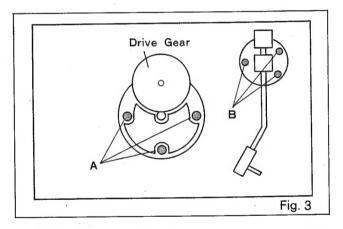

- (1) Remove the front panel ③ from the cabinet.
- (2) Tear the pitch control nameplate 33 down from the front panel and remove the two screws 10 which fasten the variable resistor.

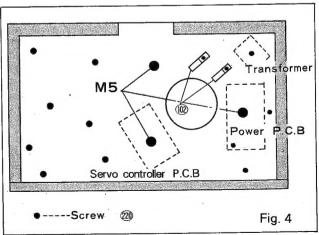

### 6. REMOVE THE SUB-CHASSIS

- (1) Remove the tone arm.
- (2) Remove the three M5 screws and the thirteen screws which mount the sub-chassis to the

cabinet (Fig. 4).

(3) Remove the terminal plate 98.

### **ADJUSTMENTS**

### 1. TOOLS REQUIRED FOR ADJUSTMENTS

Small level indicator
Hexagon box type screwdriver
Phillips-head screwdriver (M3)
Slotted-head screwdrivers (smaller size)

Note: Be sure to set the bench for adjustment level and shut the power off.

### 2. STYLUS POINT HEIGHT

Place the set with the bottom base removed on a stable table, set the turntable platter, the platter mat and a record, and check the level of the turntable with a level indicator.

### (1) Auto Up

Adjust the height from the record surface to the stylus point in the following order so that it conforms to the dimensions shown in Fig. 5 during auto return:

- (a) Set the stylus down at slightly outside position from the end sound groove of a record (65 - 70R from the turntable shaft).
- (b) Push the reject lever and slowly turn the turntable platter so that the tone arm starts auto return operation.
- (c) Stop the rotation of the turntable platter before the tone arm passing over the edge of a record and measure the gap between the stylus point and record surface.
- (d) If the gap is not within the dimensions specified in Fig. 5, turn the lifter shaft as shown in Fig. 6, and adjust the height referring to the below.

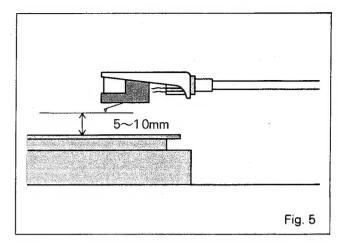

Less than 5 mm	Turn clockwise			
More than 10 mm	Turn counter-clockwise			

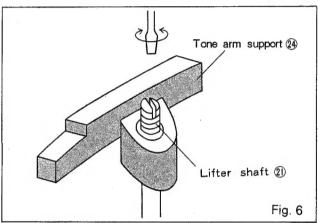

### (2) Manual Up

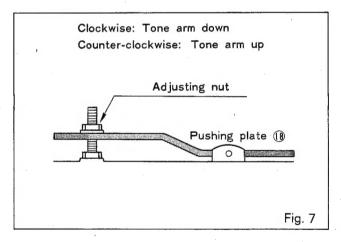

Adjust by turning the nut in Fig. 7 so that the gap between the stylus point and record surface becomes equal to that at the time of auto up when the cueing lever is set to the  $\underline{\mathbf{y}}$  position.

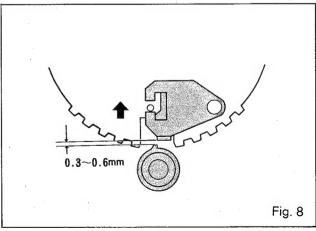

### 3. MOTOR MOUNTING POSITION

- (1) Loosen the screws A in Fig. 3 which hold the motor.
- (2) Push ratchets A and BL attached to the drive gear as far as possible in the direction of the arrow shown in Fig. 8.
- (3) Move the motor so that the gap between the turntable gear and ratchet A becomes as shown in Fig. 8. and tighten the screws.

### 4. AUTO RETURN MECHANISM

- (1) Make sure the tone arm fixing plate is properly installed as shown in Fig. 9.
- (2) Put on a record and set the stylus down slightly outside the end sound groove or 65 - 70R from the center of the turntable. When the record ends, make sure the tone arm automatically returns from any of the following positions:
  - (a) For LP records, a click is heard when the stylus is between 53 and 57.5 R and then the tone arm automatically returns.
  - (b) For EP records, a click is heard when the stylus is between 48.5 and 53 R and then the tone arm automatically returns.
  - (c) For the auto return test record (CEC RG-652), a click is heard when the stylus is between 55 and 61 R and then the tone arm automatically returns.
- (3) If the tone arm does not automatically return from all of the above positions, turn the adjusting hexagon bolt in Fig. 9 to adjust the tone arm return position. Clockwise turning of the screw brings the return position close to the center of the turntable and counterclockwise turning of the screw moves the return position away from the center of the turntable.

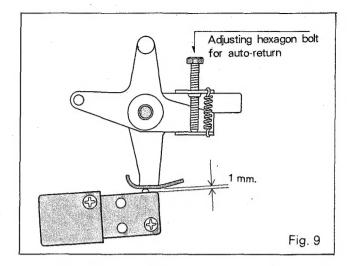

### 5. TURNTABLE SPEED

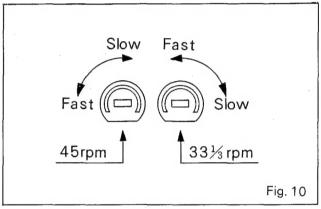

The rotating speeds of the turntable can be adjusted to minimum ±2.8% with the pitch control knob. If the specified adjusting range cannot be obtained, adjust as follows:

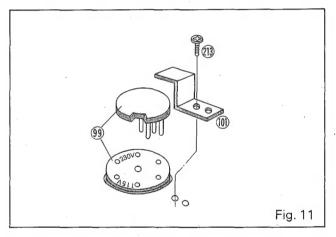

- (1) Place the pitch control knob at the center.
- (2) Remove the platter and put the speed adjusting label off from the cabinet.
- (3) Rotate from the two holes beneath the speed adjusting label the semi-fixed variable resistors. Check to see if the strobo indexes appear stationary after placing turntable platter (Fig. 10).

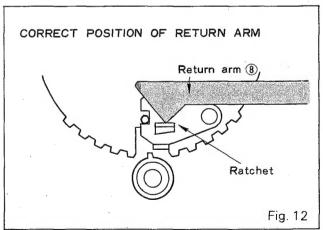

### 6. VOLTAGE CHANGEOVER (MODEL E AND G)

- (1) Voltage changeover mechanism is placed at the rear of the cabinet. Remove the screw which fastens the protector and remove the protector (Fig. 11).
- (2) Withdraw the plug and reinsert it in such a way that the desired voltage marking is exposed in the cut of the plug.
- (3) Fasten the protector with the screw.

### TROUBLESHOOTING

1. The tone arm will not automatically return.

Remove the turntable platter and check to see that the return arm lies on the ratchet BL. Yes: Place the return arm to the correct position as shown in Fig. 12. Check to see the clearance between gear of motor shaft and ratchet is reasonable (Fig. 8). Loosen three screws (Fig. 3) which fasten the motor shaft, and adjust. Rotate adjusting hexagon bolt (Fig. 9) of tone arm fixing plate counter-clockwise.

2. The tone arm returns some seconds after the end of the performance.

Rotate adjusting hexagon bolt (Fig. 9) of tone arm fixing plate counter-clockwise.

3. The tone arm returns before the end of the performance.

Rotate adjusting hexagon bolt (Fig. 9) of tone arm fixing plate clockwise.

4. The turntable platter will not rotate even though the tone arm is above the record.

Check to see that the strobo light is ON. -Yes: Motor defective. Check to see that 24±2V is Yes: Check to see that 18V is No: Check the fuses of secondary. available from the secondary available at DC output (+) in of the transformer. power printed circuit boord. Power printed circuit board 62) defective. Replace the fuse. Ok: Check the microswitch. No: Check to see that the power Yes: Check the fuse. No: Replace the fuse. plug is securely connected. No: Connect the plug, -No: Check to see that proper voltage is available at the primary of the transformer. ~ No: Replace the microswitch. Yes: Transformer defective,-No: Check the leads from the AC circuit board to the primary of the transformer.

5. The turntable platter will not stop rotating.

Check to see if the turntable will stop rotating when knob of microswitch is sufficiently pushed.

Yes: Adjust the clearance between the knob of microswitch and tip of tone arm fixing plate to 1 mm. (Fig. 9) Check the wiring. Replace wiring according to the circuit diagram. -No: Check the microswitch. No: Microswitch defective. Capacitor defective.

- Adjustment of turntable speed cannot be made.
  - · Strobo indexes appear not to stand still.

Readjust semi-fixed variable resistors referring to TURNTABLE SPEED of ADJUSTMENTS.

· No speed adjustments with variable resistor knob.

Check the wirings including the motor servo controller circuit. No: Replace wiring according to the wiring diagrams. Yes: Check the variable resister. FNo: Variable resister defective. Check the push switch. -No: Push switch defective. Yes: Motor defective.

### 7. No sound from the speaker.

Check to see that the output cords are securely connected to the amplifier (receiver).

No: Connect the cord.

Yes: Check to see that connections are made to the PHONO input terminals of the amplifier.

No: Connect to PHONO.

Yes: Check to see that the select switch of the amplifier is placed to PHONO.

Yes: Remove the headshell, touch the upper two pins at the end of the arm with a metal screwdriver and listen for the speaker to produce a humming noise. (Fig. 13)

No: Perform continuity test between the arm and output cords.

Yes: Check the connections between the cartridge and headshell.

No: Make correct connections.

Yes: Cartridge defective.

### 8. The tone arm will not go down even with the cueing lever in ▼ position.

Check to see that the lifter shaft (2) moves down when the cueing lever (14) is pushed down.

No: Replace lifter shaft assy or tone arm.

Yes: Loosen the screw of lifter shaft and adjust the clearance between stylus point and record surface to 5-10 mm when the cueing

lever is in ▼ position, referring to STYLUS POINT HEIGHT of ADJUSTMENTS.

### 9. The turntable is rotating but the strobo light will not light.

Check the 12  $k\Omega$  resistor which is connected with neon lamp in series.

Yes: Neon lamp is defective. No: Replace 12 k $\Omega$  resistor.

## PARTS REPLACEMENT

### 1. TONE ARM

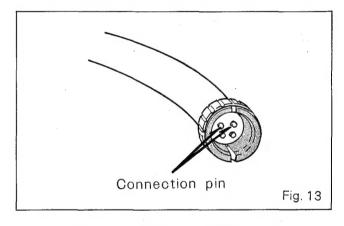

Remove the tone arm referring to DISASSEMBLY IN-STRUCTIONS, 4 step(1) to (6) and replace. To reassemble, use DISASSEMBLY INSTRUCTIONS in reverse. Adjust the tone arm referring to ADJUSTMENTS, 2 and 4.

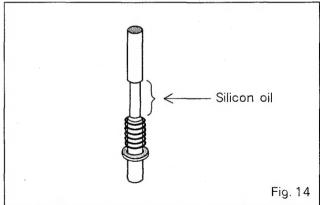

### 2. MOTOR

Remove the motor as shown in DISASSEMBLY INSTRUCTIONS, 3. Replace the new motor and fasten it by screws. After replacement, check the position of motor referring to ADJUSTMENT 3.

### 3. LIFTER SHAFT

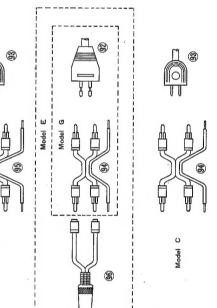

Remove the tone arm in accordance with DISASSEMBLY INSTRUCTIONS 4. Turn the lifter shaft clockwise as far as possible and the tone arm support can be removed, and pull out the lifter shaft from the tone arm in the direction of upward. Replace new lifter shaft after adhering 10<sup>5</sup> CS silicon oil (Fig. 14). After finishing reassembling, be sure to check the gap between stylus point and record surface referring to ADJUSTMENTS, 2.
